

# NCPE Assessment

## Plain English Summary

June, 2025

**Drug name:** Olaparib (pronounced Oh-LAP-a-rib) in combination with abiraterone and prednisone or prednisolone for the treatment of adults with metastatic castration-resistant prostate cancer (mCRPC) in whom chemotherapy is not clinically indicated.

**Brand name:** Lynparza®

**HTA ID:** 23029

## What is the NCPE?

---

The National Centre for Pharmacoeconomics (NCPE) is a team of experts who look at the health benefits and costs of medicines. The HSE asks us to advise on whether or not a new medicine is good value for money. We give unbiased advice to help the HSE provide the most effective, safe and cost-effective (value for money) treatments for patients.

## How do we make our recommendations?

---

Our main focus is on the health benefits and cost effectiveness of a medicine. We look at the wider costs and health benefits associated with a new medicine, for example:

- Does the new medicine work better than other treatments available in Ireland?
- Is the new medicine easier to give or easier to take compared with other treatments available in Ireland?
- Does the new medicine reduce the need for patients to be hospitalised?
- Does the new medicine improve the quality of a patient's life over other treatments available in Ireland?
- Will the new medicine save resources elsewhere within the health system?

We review the information from clinical trials along with the cost and value for money data presented by the pharmaceutical company. We ask doctors and other healthcare professionals for advice about any health benefits of the new medicine compared with current treatments. We also ask patient organisations to send us their views on how the new drug may improve patients' day-to-day experience of living with a disease.

## What is olaparib used for?

---

Olaparib is a cancer medicine that is used to treat a number of different types of cancer. For this assessment, we are focussing only on the use of olaparib in combination with abiraterone together with prednisone or prednisolone to treat prostate cancer. Olaparib is a type of targeted therapy drug called a PARP inhibitor. Abiraterone is a hormonal therapy. Olaparib in combination with abiraterone is used to treat prostate cancer when it has spread to other parts of the body (metastatic) and is not responding to treatments that lower

testosterone levels (castration resistant).

## **What recommendation has the NCPE made to the HSE?**

---

We have recommended that the HSE should consider not funding olaparib unless its cost effectiveness (value for money) can be improved. The HSE will consider our recommendation and make the final decision about reimbursement (funding). When making the funding decision, the HSE will also consider the additional [criteria](#) outlined in the Health (Pricing and Supply of Medical Goods) Act 2013.

We have received a Patient Organisation Submission from Men Against Cancer about olaparib and shared it with the HSE. This submission will form part of the data that the HSE considers.

## **Why did we make this recommendation?**

---

After reviewing the data presented by the pharmaceutical company, we concluded that it is not clear that olaparib works as well or better than other ways to manage this condition. The price of the medicine is too high compared with other ways to manage this condition, and we believe that the medicine is very poor value for money. We recommend that the HSE consider providing this medicine if the HSE can agree a suitable price reduction with the pharmaceutical company.

The HSE considers a number of factors along with our recommendation when deciding whether to provide this medicine. These factors are listed in the Health (Pricing and Supply of Medical Goods) Act 2013.

## **Next steps**

---

When the HSE receives our recommendation, it will look at all the relevant data about olaparib. The HSE makes the final decision on reimbursement.

## **Where can I get more information?**

---

You can get more information about olaparib from the following online options:

- the NCPE Technical Summary Document
- Lynparza<sup>®</sup> European Public Assessment Report (EPAR) [Summary for the public](#) – or
- searching for olaparib on our website ([www.ncpe.ie](http://www.ncpe.ie));
- searching for olaparib on the European Medicines Agency (EMA) website ([www.ema.europa.eu](http://www.ema.europa.eu)).

Please refer to the NCPE website for updated information on the reimbursement status of this medicine.
