

NCPE Assessment

Plain English Summary

September 2025

Drug name: Tucatinib
(pronounced too-KA-tih-nib) in combination with trastuzumab and capecitabine for the treatment of adult patients with HER2-positive locally advanced or metastatic breast cancer who have received at least two prior anti-HER2 treatment regimens.

Brand name: Tukysa®

HTA ID: 22058

What is the NCPE?

The National Centre for Pharmacoeconomics (NCPE) is a team of experts who look at the health benefits and costs of medicines. The HSE asks us to advise on whether or not a new medicine is good value for money. We give unbiased advice to help the HSE provide the most effective, safe and cost-effective (value for money) treatments for patients.

How do we make our recommendations?

Our main focus is on the health benefits and cost effectiveness of a medicine. We look at the wider costs and health benefits associated with a new medicine, for example:

- Does the new medicine work better than other treatments available in Ireland?
- Is the new medicine easier to give or easier to take compared with other treatments available in Ireland?
- Does the new medicine reduce the need for patients to be hospitalised?
- Does the new medicine improve the quality of a patient's life over other treatments available in Ireland?
- Will the new medicine save resources elsewhere within the health system?

We review the information from clinical trials along with the cost and value for money data presented by the pharmaceutical company. We ask doctors and other healthcare professionals for advice about any health benefits of the new medicine compared with current treatments. We also ask patient organisations to send us their views on how the new drug may improve patients' day-to-day experience of living with a disease.

What is tucatinib used for?

Tucatinib is a cancer medicine that is used to treat breast cancer that is locally advanced or metastatic (has spread to other parts of the body) and when it is HER2-positive. This means the cancer cells produce a protein on their surface called HER2, which stimulates the growth of the cancer. Tucatinib is used with two other medicines, capecitabine and trastuzumab, after at least two other treatments for HER2-positive cancer have already been tried.

What recommendation has the NCPE made to the HSE?

We have recommended that the HSE should consider not funding tucatinib (Tukysa®) unless its cost effectiveness (value for money) can be improved. The HSE will consider our recommendation and make the final decision about reimbursement (funding). When making the funding decision, the HSE will also consider the additional [criteria](#) outlined in the Health (Pricing and Supply of Medical Goods) Act 2013.

Why did we make this recommendation?

We have completed a full health technology assessment for this medicine. We recommend that the HSE consider providing this medicine unless the HSE can agree a suitable price reduction with the pharmaceutical company. We believe the medicine may work as well or better than other ways to manage this condition. However, the price of the medicine is too high compared with other ways to manage this condition, and we believe that the medicine is not value for money.

The HSE considers a number of factors along with our recommendation when deciding whether to provide this medicine. These factors are listed in the Health (Pricing and Supply of Medical Goods) Act 2013.

Next steps

When the HSE receives our recommendation, it will look at all the relevant data about tucatinib. The HSE makes the final decision on reimbursement.

Where can I get more information?

You can get more information about tucatinib from the following online options:

- the NCPE Technical Summary Document
- Tukysa® European Public Assessment Report (EPAR) – [Summary for the public](https://www.ema.europa.eu/documents/overview/raxone-epar-summary-public_en.pdf)
https://www.ema.europa.eu/documents/overview/raxone-epar-summary-public_en.pdf

or

- searching for tucatinib on our website (www.ncpe.ie);
- searching for tucatinib on the European Medicines Agency (EMA) website (www.ema.europa.eu).

Please refer to the NCPE website for updated information on the reimbursement status of this medicine.
