

NCPE Assessment

Plain English Summary

May 2026

Drug name: Amivantamab (pronounced A-mih-VAN-tuh-mab) in combination with lazertinib (pronounced laz-ER-ti-nib) for the first-line treatment of adult patients with advanced non-small cell lung cancer (NSCLC) with EGFR exon 19 deletions or exon 21 L858R substitution mutations.

Brand name: Rybrevant® in combination with Lazcluze®

HTA ID: 25006

What is the NCPE?

The National Centre for Pharmacoeconomics (NCPE) is a team of experts who look at the health benefits and costs of medicines. The HSE asks us to advise on whether or not a new medicine is good value for money. We give unbiased advice to help the HSE provide the most effective, safe and cost-effective (value for money) treatments for patients.

How do we make our recommendations?

Our main focus is on the health benefits and cost effectiveness of a medicine. We look at the wider costs and health benefits associated with a new medicine, for example:

- Does the new medicine work better than other treatments available in Ireland?
- Is the new medicine easier to give or easier to take compared with other treatments available in Ireland?
- Does the new medicine reduce the need for patients to be hospitalised?
- Does the new medicine improve the quality of a patient's life over other treatments available in Ireland?
- Will the new medicine save resources elsewhere within the health system?

We review the information from clinical trials along with the cost and value for money data presented by the pharmaceutical company. We ask doctors and other healthcare professionals for advice about any health benefits of the new medicine compared with current treatments. We also ask patient organisations to send us their views on how the new drug may improve patients' day-to-day experience of living with a disease.

What is amivantamab in combination with lazertinib used for?

Amivantamab is a cancer medicine used for adults with advanced non-small cell lung cancer (NSCLC) whose cancer cells have certain genetic changes in the epidermal growth factor receptor (EGFR) gene. Amivantamab is used in combination with the cancer medicine lazertinib when the NSCLC has EGFR exon 19 deletions or exon 21 L858R substitution mutations.

What recommendation has the NCPE made to the HSE?

We have recommended that the HSE should consider not funding amivantamab in combination with lazertinib unless its cost effectiveness (value for money) can be improved. The HSE will consider our recommendation and make the final decision about reimbursement (funding). When making the funding decision, the HSE will also consider the additional [criteria](#) outlined in the Health (Pricing and Supply of Medical Goods) Act 2013.

We have received a Patient Organisation Submission from the Irish Lung Cancer Community about advanced non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 L858R substitution mutations and shared it with the HSE. This submission will form part of the data that the HSE considers.

Why did we make this recommendation?

After reviewing the data presented by the pharmaceutical company, we recommend that the HSE consider **not** providing amivantamab in combination with lazertinib unless the HSE can agree suitable price reductions, with the pharmaceutical company, for both medicines. This is because we believe amivantamab in combination with lazertinib may work as well or better than other ways to manage this condition. However, the combined price of the two medicines is too high compared with other ways to manage this condition, and we believe that amivantamab in combination with lazertinib is very poor value for money.

The HSE considers a number of factors along with our recommendation when deciding whether to provide this medicine. These factors are listed in the Health (Pricing and Supply of Medical Goods) Act 2013.

Next steps

When the HSE receives our recommendation, it will look at all the relevant data about amivantamab in combination with lazertinib. The HSE makes the final decision on reimbursement.

Where can I get more information?

You can get more information about amivantamab in combination with lazertinib from the following online options:

- the NCPE Technical Summary Document
- amivantamab European Public Assessment Report (EPAR) – [Summary for the public](#)
- lazertinib European Public Assessment Report (EPAR) – [Summary for the public](#),
or
- searching for amivantamab or lazertinib on our website (www.ncpe.ie);
- searching for amivantamab or lazertinib on the European Medicines Agency (EMA) website (www.ema.europa.eu).

Please refer to the [HSE website](#) for updated information on the reimbursement status of this medicine.
